MISSING

1

DEFERRED

Per-item status

1. Home page

COMPLETE+

Done HeroStrip, CategoryCarousel, multiple live rails (ClosingToday, TopMovers, ForYou, EditorialPicks, PositionsMoving, CrowdVsReality, TradeTicker, StreakBanner), SSE pipe via /api/stream, MarketCardSkeleton, empty/error states.

Missing Far exceeds the original spec; nothing critical missing.

2. Market detail (Bet) screen

COMPLETE

Done PriceHistoryChart + /api/markets/[id]/price-history, TradeBox (size, fees, slippage, position summary), OutcomeList, MarketTabs, RightSidebar, SocialSection (comments), confirm/error toasts via ToastContext, POST /api/trades.

Missing —

3. Trending page

PARTIAL

Done Filter + sort (volume / movers / ending / newest) + search wired to live SSE markets via WalletContext.

Missing Infinite scroll. Dedicated /api/trending endpoint with cursor pagination (currently re-uses /api/markets).

4. Portfolio page

PARTIAL

Done Open-positions grouping by market+outcome, P&L sparkline, history list, close-position via /api/positions/close.

Missing Claim button on resolved-win rows. POST /api/claim endpoint.

5. Wallet page

COMPLETE

Done Hero balance + 24h PnL chip, multi-currency token strip (selectable), 3-stat row (Cash / In Open Trades / Realized PnL), filtered tx history (All / Deposit / Trade / Payout / Withdrawal), deposit + withdraw subroutes, sidebar promo / network / help cards. Just redesigned.

Missing Per-token balances are mocked (USDC=real, others=0) until /api/me returns a per-token map.

6. Profile page

PARTIAL

Done /profile (581 lines — stats, badges, etc.), /api/me.

Missing Public route /u/[username]/page.tsx. Public-vs-private toggle + endpoint.

7. Search modal

COMPLETE

Done SearchModal (184 lines), Cmd-K + '/' triggers wired in Navbar, result click routes to relevant page.

Missing Uses /api/markets — no dedicated /api/search (acceptable for current corpus size).

8. Notifications

PARTIAL

Done NotificationsDropdown in navbar, /api/notifications, SSE-pushed unread count, /settings/notifications for prefs, NotificationsPrompt component.

Missing Full /notifications page. PATCH read-state endpoint (/api/notifications/[id]/read).

9. Settings sub-pages

PARTIAL

Done /settings (general), /settings/notifications.

Missing /settings/security (password, 2FA, sessions). /settings/currency.

10. Auth screens

PARTIAL

Done /auth/signin, /auth/signup, NextAuth wired, signed-out routing for Wallet/Bell.

Missing /auth/forgot-password (request) + /auth/reset-password (token consume).

11. Leaderboard

PARTIAL

Done /leaderboard page exists. /api/leaderboard endpoint exists.

Missing Page renders 5 hardcoded mock rows — no fetch wired. No timeframe toggle. No 'your rank' callout.

12. Smart contracts

DEFERRED

Done —

Missing Deferred by design. USDC custody, on-chain settlement, fee router. Ship centralised first; migrate later.

Extras shipped (not on the original roadmap)

- **LeftRail** — full collapsible / mobile-drawer sidebar; replaced the old AccountDrawer + NavigationDrawer.
- **Sports vertical** — /sports, /sports/all, /sports/esports.
- **CurrencyPicker** in navbar — multi-token switching, glow-ring active state, Check badge, scrollbar-hide.
- **Dashboard subroutes** — /dashboard/activity, /dashboard/admin, /dashboard/markets.
- **Admin tools** — market resolution, withdrawal approve / reject / complete (/api/admin/markets/[id]/resolve, /api/admin/withdrawals/*).
- **Audit log API** — /api/admin/audit-log.
- **Cron job** — /api/cron/close-expired auto-closes expired markets.
- **Health + status endpoints** — /api/health, /api/status.
- **SIWE nonce endpoint** — /api/auth/siwe/nonce (web3 sign-in foundation).
- **Coin Flip game** — CoinFlip.tsx home module.
- **Cryptolcon** + 7-token spec system with PNG fallbacks.
- **Navbar polish** — icon-pill nav, narrower search, hamburger on the right, profile-icon removed, Wallet+Bell always visible.
- **Wallet hero redesign** — violet→fuchsia gradient, sparkline overlay, sidebar promo column.

Remaining / incomplete (punch-list)

Trending	Infinite scroll + dedicated /api/trending with cursor pagination
Portfolio	Claim button on resolved-win rows + POST /api/claim
Profile	Public route /u/[username]/page.tsx + public-toggle prefs
Notifications	/notifications full page + PATCH /api/notifications/[id]/read
Settings	/settings/security (password, 2FA, sessions). /settings/currency.
Auth	/auth/forgot-password (request) + /auth/reset-password (token)
Leaderboard	Wire /api/leaderboard, timeframe toggle, your-rank callout (kill mock data)
Wallet	Real per-token balances on /api/me (replace tokenBalance() mock)
Smart contracts	Deferred (item 12; needs Solidity engineer)

Recommended build order to close out gaps

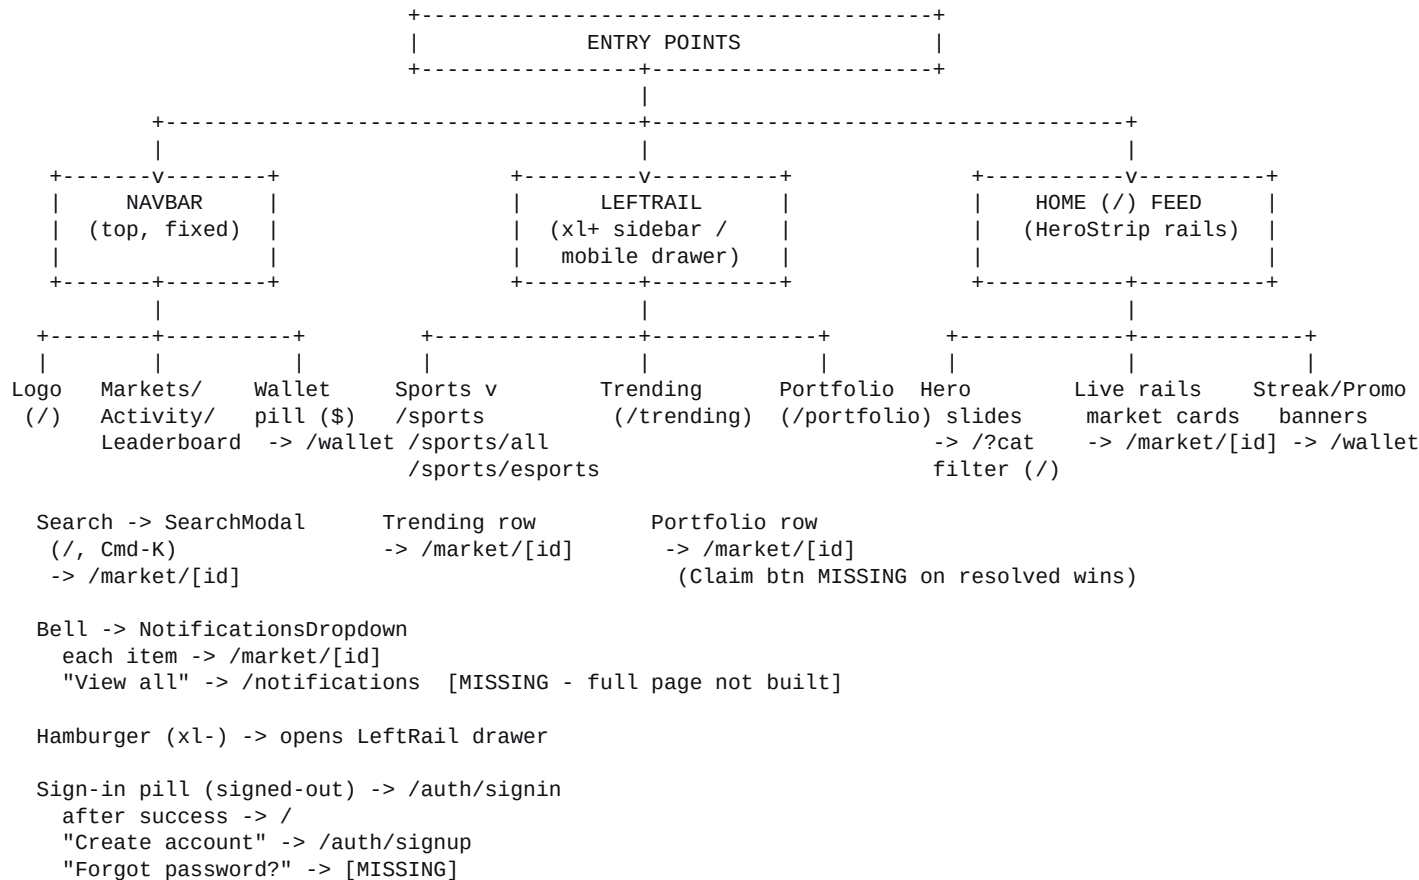

Cheapest wins first — top to bottom:

1. **Wire /leaderboard to /api/leaderboard** + add timeframe toggle. Lowest risk; removes the only fully-mocked page in the app.

2. **/notifications full page** + PATCH read-state. UI exists in NotificationsDropdown; just needs a list page.
3. **/u/[username] public profile** + /api/u/[username]. Unblocks leaderboard row clicks.
4. **/auth/forgot-password** + reset flow. NextAuth supports email providers out of the box.
5. **/settings/security** + /settings/currency. Add stub pages first; wire endpoints after.
6. **Trending infinite scroll** + cursor endpoint.
7. **Portfolio Claim** button + /api/claim.
8. **Per-token wallet balances** on /api/me. Replace the tokenBalance() mock in src/app/wallet/page.tsx.
9. **Smart contracts** — deferred indefinitely.
