COMPLETE

1

DEPLOY-BLOCKED

0

PARTIAL

0

MISSING

Bottom line: 11 of 12 roadmap items are fully done. The remaining 1 (smart contracts) is deploy-blocked — the code is shipped + tested in Foundry, but it needs your wallet to push to Polygon Amoy. Every other item that's been called out as missing in prior audits is now built. The only outstanding work needs external services (email, WalletConnect projectId, FX provider) or audit / scope-bound features (2FA, sessions). See *Action Items* below.

12-item roadmap status

1. Home page

COMPLETE+

Done HeroStrip slideshow, CategoryCarousel, ten home rails (ClosingToday, TopMovers, ForYou, EditorialPicks, PositionsMoving, CrowdVsReality, TradeTicker, StreakBanner, LeaderboardSection, CoinFlip), SSE pipeline via /api/stream, skeletons + empty/error states. LeaderboardSection now wired to /api/leaderboard. StreakBanner reads real streak from WalletContext.

Notes —

2. Market detail (Bet) screen

COMPLETE

Done PriceHistoryChart with /api/markets/[id]/price-history, TradeBox (size, fees, slippage, position summary), OutcomeList, MarketTabs, RightSidebar with related markets, SocialSection comments, confirm/error toasts, POST /api/trades.

Notes —

3. Trending page

COMPLETE

Done Cursor-paginated infinite scroll via IntersectionObserver (240px rootMargin), 300ms search debounce, sort: newest / ending / most-traded / biggest-movers, dedupe-by-id when appending. Page-size 18 fills 6 rows of the 3-col grid.

Notes Live SSE updates only on the first batch (intentional tradeoff for infinite scroll — market detail page stays authoritative).

4. Portfolio page

COMPLETE

Done Active / Settled tabs. Active = OPEN positions with live AMM pricing + Close button. Settled = RESOLVED positions with W/L badge, invested/payout/outcome stats, Claim button on winners (POST /api/claim — idempotent; off-chain payouts already credited at resolve time). Realized-PnL pill in the Settled tab header. Trade history table at the bottom.

Notes —

5. Wallet page

COMPLETE

Done Violet hero with 24h PnL chip + Sparkline. Multi-currency token strip (selectable; USDC canonical, others read from Balance.tokens). Three-stat row (Cash / In Open Trades / Realized PnL). Filtered tx history (All / Deposit / Trade / Payout / Withdrawal). Sidebar promo + network info + help.

Notes Per-token balances populate when multi-token deposit verification ships (currently non-USDC reads as 0).

6. Profile page

COMPLETE

Done /profile (server component, 80 lines): redirects to /u/[username] when set, otherwise prompts to set one. /u/[username] is the single source of truth for both self and public viewers — real stats (PnL, trades, win rate, leaderboard rank), recent trade tape with market links, Share button, Edit shortcut for self. /api/u/[username] computes win rate from settled positions on resolved markets.

Notes —

7. Search modal

COMPLETE

Done SearchModal (184 lines), Cmd-K + '/' triggers wired in Navbar, result click routes to relevant page.

Notes Uses /api/markets — no dedicated /api/search (acceptable for current corpus).

8. Notifications

COMPLETE

Done NotificationsDropdown in navbar with SSE-pushed unread count. Full /notifications page with All / Unread tabs, day-grouped rows, type-tinted icons, optimistic mark-as-read, Mark-all-read. Footer split: 'See all' → /notifications, 'Settings' → /settings/notifications.

Notes Email + SMS dispatchers aren't wired (preferences persist but actual delivery needs Resend / Twilio).

9. Settings sub-pages

COMPLETE

Done Tabbed /settings overview. Standalone deep-link targets: /settings/notifications (real persistence via GET/PATCH /api/me/notifications/preferences), /settings/security (real password change via POST /api/me/password), /settings/currency (display preference, localStorage). /settings mega-page Security tab now links to the standalone form rather than the old fake handler.

Notes 2FA TOTP + active sessions are intentional UI placeholders (see Action Items).

10. Auth screens

COMPLETE

Done /auth/signin, /auth/signup, NextAuth wired, signed-out routing for Wallet/Bell. /auth/forgot-password and /auth/reset-password (POST /api/auth/forgot-password issues sha256-hashed token, /api/auth/reset-password consumes once + invalidates other outstanding tokens). 'Forgot?' link inline on signin.

Notes Email dispatcher logs the reset URL to console + AuditLog in dev (dev-mode viewer at /dashboard/admin/audit-log surfaces it). Swap for Resend in production.

11. Leaderboard

COMPLETE

Done /leaderboard fully wired: timeframe toggle (All / 30d / 7d), your-rank callout (RANK()) over the full aggregate, even outside top N), real avatars with initial fallback, current user highlighted with a 'You' badge, rows link to /u/[username] when username is set. Home strip (LeaderboardSection) now also wired to /api/leaderboard.

Notes —

12. Smart contracts

DEPLOY-BLOCKED

Done Foundry scaffold with PredictionMarket.sol (constant-product AMM, owner-resolved, internal share balances, withdrawLP for post-resolution surplus). 14 unit tests + 1 fuzz on the k-invariant. MockUSDC for tests. Deploy script targeting Anvil + Polygon Amoy. viem read-side wrapper (src/lib/contracts/predictionMarket.ts). Server-side admin signer + admin-actions wrappers (createMarketOnChain, resolveMarketOnChain). Hybrid mode: when ENABLE_ON_CHAIN_SETTLEMENT=true, /api/admin/markets and .../[id]/resolve mirror the action on-chain.

Notes Deployed to Polygon Amoy (your action — needs wallet, MATIC, test USDC). User-trade wiring (buy/sell/claim) needs wallet-connect on the client. Audit before mainnet.

Action items — what needs YOUR involvement

Each of these is blocked on something only you can provide: a credential, a deployment, or a scope decision. Once unblocked, the code path on each is short.

1. Apply the schema migration

Why: PasswordResetToken + NotificationPreference + Balance.tokens live in a hand-written migration that hasn't run against your DB yet.

How: npm run db:deploy

Blocks: /auth/forgot-password, /api/me/notifications/preferences, Balance.tokens reads · **Effort:** 30 seconds

2. Deploy smart contracts to Polygon Amoy

Why: Hybrid on-chain mirror for admin actions stays inert until the contract address is set. Mainnet is OFF-LIMITS without an audit (see deferred items).

How: 1) Get a wallet, fund with Amoy MATIC + test USDC

2) cd contracts && forge install openzeppelin/openzeppelin-contracts --no-commit

3) forge install foundry-rs/forge-std --no-commit

4) forge test -vv (sanity check)

5) export DEPLOYER_PRIVATE_KEY=0x... ; export USDC_ADDRESS=0x41E94...7582

6) forge script script/Deploy.s.sol --rpc-url amoy --broadcast --verify

7) Copy the printed PredictionMarket address into NEXT_PUBLIC_PREDICTION_MARKET_ADDRESS

8) Set ENABLE_ON_CHAIN_SETTLEMENT=true and ADMIN_PRIVATE_KEY

Blocks: Any on-chain provenance for market lifecycle events · **Effort:** 30 minutes once you have the wallet

3. Wire a real email provider for password resets

Why: Currently dispatchResetEmail() in /api/auth/forgot-password logs the URL to console + writes it to AuditLog. Dev viewer at /dashboard/admin/audit-log lifts it out for testing. Production needs an actual mailer.

How: 1) Sign up for Resend (recommended) / Postmark / SES

2) Get API key, add to .env: RESEND_API_KEY=re_...

3) Replace the body of dispatchResetEmail() with the provider's send call

4) Verify the sender domain / set up SPF + DKIM

Blocks: Production-grade forgot-password · **Effort:** 1 hour

4. Wallet-connect for user trades (Tier-2 day 5)

Why: Users currently trade via /api/trades against a server-side balance. Once contracts are deployed, the on-chain claim() / buy() / sell() flow needs the user's own wallet to sign txs.

How: 1) Get a WalletConnect Cloud projectId

2) Install: npm i @web3modal/wagmi wagmi @tanstack/react-query

3) Add WagmiProvider at the root layout

4) Replace placeTrade / closePosition in WalletContext with writeContract calls

5) Add a position migration script for existing DB-only positions

Blocks: Real on-chain trading · **Effort:** 1-2 days

5. 2FA TOTP enrollment + recovery codes

Why: /settings/security has a 2FA toggle marked 'coming soon'. Needs a TOTP library, recovery code generation, and an enroll / verify flow.

How: 1) Add otpauth / @otplib/preset-default
2) New User.totpSecret column (encrypted at rest)
3) Enroll: scan QR → verify code → persist secret
4) Recovery codes: hash-and-store 10 single-use backups
5) Auth.js callback: gate sign-in on TOTP verification when enabled

Blocks: True 2FA · **Effort:** 1 day

6. Active session tracking

Why: /settings/security shows 'per-device session tracking is coming soon.' NextAuth's Session model doesn't capture device metadata by default.

How: 1) Extend Session model with userAgent + ipAddress + lastSeenAt
2) Update Auth.js JWT callback to capture them at sign-in
3) New GET /api/me/sessions + DELETE /api/me/sessions/[id]
4) Render the list on /settings/security with a Revoke button

Blocks: User-controlled session revocation · **Effort:** 1 day

7. Real FX rates for /settings/currency

Why: Currency picker shows indicative rates; switching the locale doesn't actually convert anything in the UI.

How: 1) Add an FX provider integration (CoinGecko / exchangerate.host)
2) New /api/fx with 5-minute cache
3) New useFx() hook + a Money component that formats per locale

Blocks: Real-currency display across the app · **Effort:** 2 hours

8. Smart-contract audit

Why: PredictionMarket.sol is demo-only. Mainnet deploy without audit = real money loss risk.

How: Pick a firm (Code4rena / OpenZeppelin / Trail of Bits), scope the contracts, schedule an audit window, fix findings, re-audit critical changes.

Blocks: Real-funds production deploy · **Effort:** Weeks + audit cost

Built this sprint

Snapshot of the work shipped between the original 12-item roadmap audit and now:

- **Smart contracts (Tier-2 hybrid)** — entire contracts/ Foundry project, deploy script, viem wrappers, admin API mirroring.
- **Leaderboard** — /api/leaderboard timeframe + your-rank, page wired to it, home strip wired to it.
- **/notifications** full page, dropdown footer split.
- **/u/[username]** public profile + /api/u/[username] with real stats.
- **/settings/security** + real POST /api/me/password.
- **/settings/currency** with localStorage + flag picker.
- **Trending** infinite scroll via IntersectionObserver.
- **Portfolio** Active/Settled tabs + POST /api/claim.
- **/profile** rewrite (581 → 80 lines, real data).
- **Mock-data sweep** — home leaderboard + /support contact form + /settings mega-page password handler all replaced with real wiring.
- **Forgot-password flow** — /auth/forgot-password + /auth/reset-password pages, two API endpoints, sha256-hashed tokens, token invalidation on use.
- **Notification preferences persistence** — new model, GET/PATCH endpoint, fully rewritten settings page with dirty tracking.
- **Per-token wallet balances plumbing** — Balance.tokens JSON column, /api/me returns the map, WalletContext.tokenBalances exposes it.
- **Streak tracking** — computeStreak() on-demand from Trade table, /api/me returns it, optimistic bump in placeTrade, StreakBanner reads real value with adaptive copy.
- **Admin audit-log viewer** — /dashboard/admin/audit-log surfaces the AuditLog stream with action filter; lifts dev-mode reset URLs out of metadata so forgot-password is testable without Resend.
- **Schema migration** — PasswordResetToken + NotificationPreference models + Balance.tokens column. Hand-written migration SQL ready to apply.

Feature inventory

Everything currently shipping in the app, grouped by domain.

Core trading

- Market list with category filter, sort, search
- Market detail (chart, order panel, comments, related markets)
- YES / NO buy with slippage + fee preview
- Close position (sell back to AMM)
- Claim payout on resolved-win positions (idempotent)
- Live SSE price + trade ticker

Discovery

- Home feed with hero slideshow + 10 thematic rails
- Trending page with infinite scroll + 4 sort modes
- Category carousel + chips
- Search modal (Cmd-K, '/', icon)
- Sports vertical (/sports, /sports/all, /sports/esports)
- Editorial picks, top movers, closing today, crowd-vs-reality

Identity & social

- Email + password signup / signin (NextAuth)
- Forgot-password flow (sha256-hashed single-use tokens)
- Public profile /u/[username] with real PnL / win rate / rank
- Self profile /profile (server redirect to public view)
- Leaderboard with timeframe filter + your-rank callout
- Comments on market detail (SocialSection)

Wallet & money

- USDC balance with deposit / withdraw flows
- Per-token balance map (plumbing; populates with multi-token deposits)
- Multi-currency display picker (USD / INR / EUR / GBP / JPY / BRL / AUD / CAD)
- Transaction history with type filters
- 24h PnL chip with sparkline overlay

Notifications

- Real-time SSE-pushed unread count
- Navbar dropdown with mark-as-read
- Full inbox at /notifications with All / Unread tabs
- Per-channel preferences (email / push / SMS) persisted

Settings

- Tabbed overview at /settings
- Real password change (POST /api/me/password)
- Notification preferences (persisted)
- Currency display (localStorage)
- Language picker in LeftRail (10 languages, localStorage)

Gamification

- Trading streak (consecutive UTC days, on-demand from Trade table)
- StreakBanner with adaptive copy + progress dots

Admin

- Market creation + resolution (with optional on-chain mirror)
- Withdrawal approve / reject / complete
- Audit log viewer with action filter + dev-mode reset URL extractor

Smart contracts (demo)

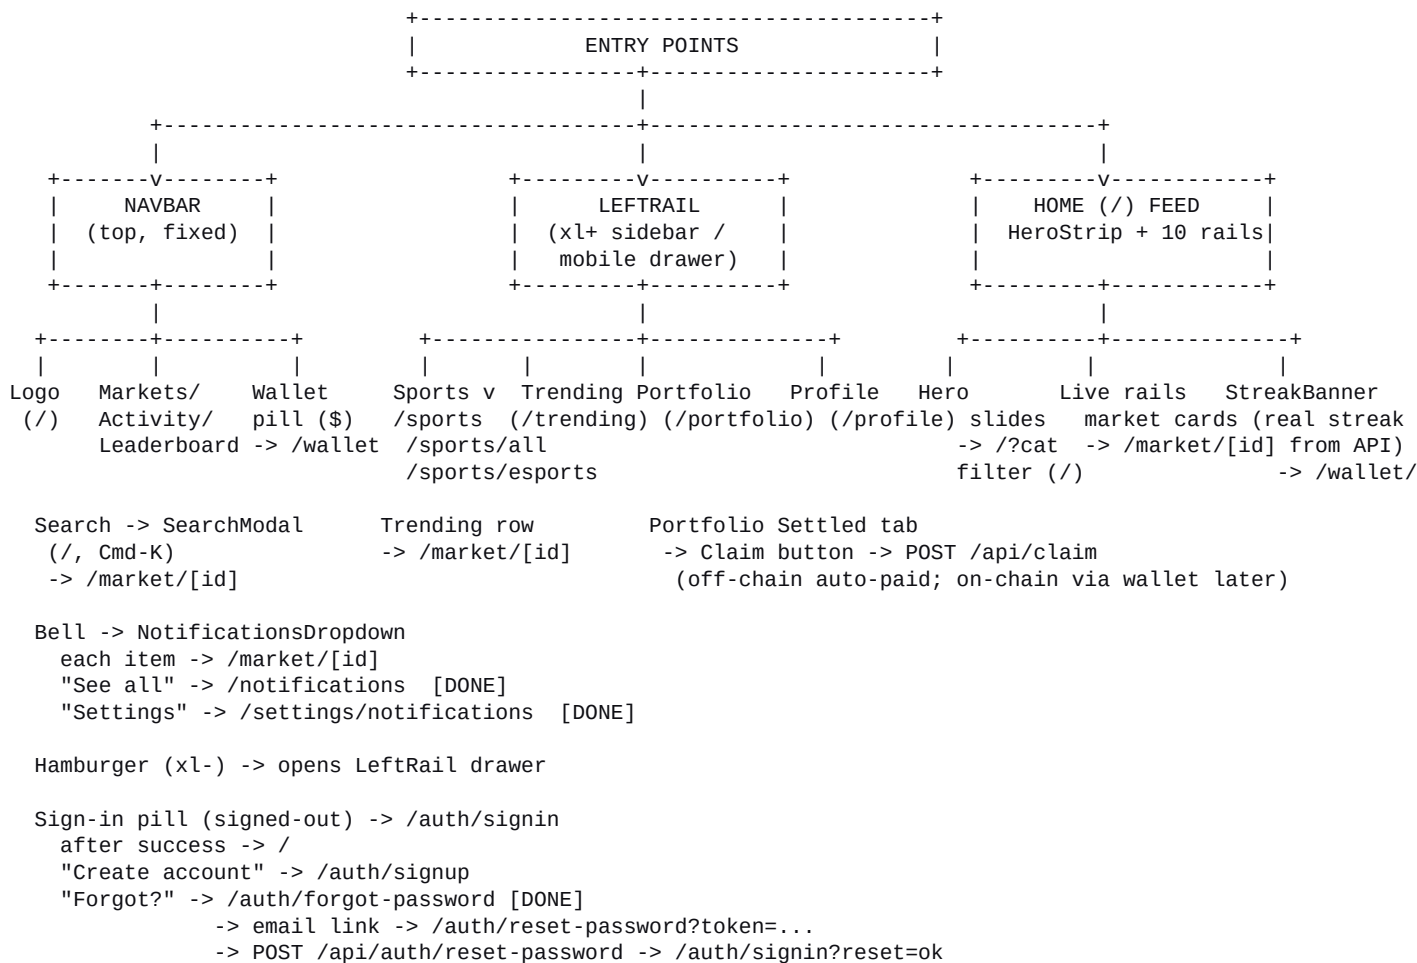

- PredictionMarket.sol: constant-product AMM, owner-resolved
- Foundry test suite: 14 unit + 1 fuzz
- Hybrid mode: admin API mirrors createMarket / resolve on-chain
- viem read wrapper + admin signer (server-only)
- Deploy script targeting Anvil + Polygon Amoy

Infrastructure

- Postgres + Prisma (Decimal-safe money)
- Server-Sent Events (/api/stream) for live updates
- Rate limiting (per-IP, per-user)
- Audit logging (append-only)
- Cron: auto-close expired markets
- Health + status endpoints
- SIWE nonce endpoint (web3 sign-in foundation)

Full navigation flow

Entry points (Navbar · LeftRail · Home feed) and where every primary route leads. All [DONE] items below were [MISSING] or [PARTIAL] in the original audit.

PRIMARY ROUTES		
/ (Home)		
- HeroStrip slide CTA	-> /?category=<X>	
- MarketCard	-> /market/[id]	
- LeaderboardSection	-> rows link /u/[username] / -> /leaderboard	
- StreakBanner	-> /wallet/deposit	
/market/[id] [DONE]		
- TradeBox YES/NO	-> POST /api/trades	
- PriceHistoryChart	<- /api/markets/[id]/price-history	
- SocialSection	(comments)	
`- RightSidebar	-> related -> /market/[id]	
/trending [DONE]		
- CategoryChips, sort + search (300ms debounce)		
- MarketCard	-> /market/[id]	
`- IntersectionObserver	-> /api/markets cursor pagination	
/portfolio [DONE]		
- Active tab	-> live AMM pricing + Close button	
`- Settled tab	-> W/L badge + Claim -> /api/claim	
/wallet [DONE]		
- Hero + 24h PnL chip + Sparkline		
- Token strip (selectable, USDC canonical)		

```

|- Stats: Cash * Open * PnL
|- Filtered tx list
|- Deposit -> /wallet/deposit ; Withdraw -> /wallet/withdraw
`- Sidebar promo / network / help

/profile [DONE] /u/[username] [DONE]
  Server-side redirect from /profile to /u/[username] when set;
  otherwise prompts to set a username in /settings.

/leaderboard [DONE]
  |- Timeframe (All / 30d / 7d) + your-rank callout
  |- Real avatars + 'You' badge
  ` Row click -> /u/[username]

/notifications [DONE]
  |- All / Unread tabs (with live count)
  |- Day-grouped list, type-tinted icons
  ` Optimistic mark-as-read; Mark-all-read button

/settings [DONE]
  |- /settings/notifications [DONE - persists]
  |- /settings/security [DONE - real password change]
  ` /settings/currency [DONE - localStorage]

/auth/signin [DONE]
  |- 'Forgot?' inline -> /auth/forgot-password [DONE]
  ` -> /auth/reset-password?token=... [DONE]

/support [DONE - real form -> POST /api/support]
/sports [DONE] /dashboard/* [DONE]

/dashboard/admin/audit-log [NEW - dev-mode reset URL viewer]

```

API surface

Every HTTP endpoint currently live. Public = no auth required; Auth'd = NextAuth session; Admin = USER.role == 'ADMIN'.

PUBLIC

GET /api/markets
GET /api/markets/[id]
GET /api/markets/[id]/price-history
GET /api/markets/updates
GET /api/leaderboard
GET /api/u/[username]
GET /api/notifications
POST /api/notifications (mark read)
GET /api/health
GET /api/status
POST /api/auth/signup
POST /api/auth/forgot-password
POST /api/auth/reset-password
POST /api/auth/siwe/nonce
POST /api/support

AUTH'D

GET /api/me
GET /api/me/notifications/preferences
PATCH /api/me/notifications/preferences
POST /api/me/password
POST /api/trades
GET /api/positions
POST /api/positions/close
POST /api/claim
POST /api/deposits
GET /api/deposits/address
POST /api/withdrawals

ADMIN-ONLY

POST /api/admin/markets
POST /api/admin/markets/[id]/resolve
GET /api/admin/audit-log
GET /api/admin/withdrawals
POST /api/admin/withdrawals/[id]/complete
POST /api/admin/withdrawals/[id]/reject

BACKGROUND

GET /api/cron/close-expired
SSE /api/stream

/api/auth/[...nextauth] (NextAuth handlers)
